

Former executive director of E.ON-Ruhrgas, Hans-Peter Floren, to join Aliquantum

One of Europe's leading energy managers takes a stake in Anglo-German hydropower specialist and heads up the company. The Supervisory Board of Aliquantum Energy plc has appointed Hans-Peter Floren (55) as Chief Executive Officer (CEO).

London / Essen, May 2016 – “We are delighted at securing the services of Hans-Peter Floren. He is now set to use his management experience, gained within European energy conglomerates, to direct the fortunes of Aliquantum Energy as it moves along its growth track”, said John W. Cutts, Chairman of the company in London. Together with Cutts, and with Sven Sönnecken as Chief Operating Officer, Floren will be responsible for the strategy of the Anglo-German New Energy company.

Hans-Peter Floren began his career at Ruhrgas AG in Essen. He took over as Managing Director of E.ON Gas Storage GmbH in 2008, becoming a member of the Executive Board of E.ON Ruhrgas AG in 2010. From 2012 until the end of 2014 he was the Executive Director responsible for the Gas & Power division at Austrian company OMV AG. He was appointed to the Supervisory Board of Latvijas Gaze in Latvia in March 2016 as part of the acquisition of an equity interest by the Marguerite Fund.

Aliquantum Energy is building a clever portfolio of productive hydroelectric power plants in Europe. Small and medium-sized power plants with decentralized control systems are set to provide a major share of the clean, ecological and sustainable

energy mix going forward. Complementing wind and solar, they represent the third pillar of renewable energies when it comes to implementing the Paris Climate Agreement – and, with virtual power plants, generate attractive returns from the sale of electricity thanks to their high levels of efficiency and mature technologies.

Aliquantum Energy plc invests capital from institutional investors and high-net-worth private investors in European hydropower generation plants in regions whose geology makes them highly attractive. The company is currently using its contacts among political and business decision-makers in south-eastern Europe with a view to funding small and medium-sized run-of-the-river hydroelectric power plants. In those countries, electricity from renewable energies is sold under a remuneration system similar to that operated, say, in Germany, guaranteeing ongoing cash flows of attractive proportions.
