

First institutional investor acquires a stake in Aliquantum Energy

Fakt Energy AG won over by a special investment proposition

London / Essen, June 2016 – Up-and-coming New Energy company Aliquantum Energy has won its first institutional investor with its convincing proposition. Essen-based Fakt Energy AG has taken a major stake in the company which specialises in small and medium-sized hydroelectric power plants.

A survey of institutional investors has shown that large-scale investors attach great importance to hydropower, with two thirds of them predicting stable long-term cash flows. Other positive factors were diversification in the overall portfolio, inflation protection and attractive returns. Regarded as downsides are the lack of investment opportunities and what is often inadequate experience on the part of asset managers.

Aliquantum Energy is building a portfolio of attractive renewable energy projects with the aim of launching on the stock exchange in the medium term. “We are investing in the next generation of clean energy projects,” says Aliquantum CEO Hans-Peter Floren, describing the company's strategy. “Tomorrow's entire energy sector is set to be characterised by decentralisation, miniaturisation and autonomous structures, and with our small and medium-sized plants we are taking up position in financially attractive niche markets in the hydropower sector.”

A few days ago, Aliquantum Energy acquired a shareholding in Serbian company W&W Energy, giving the company a stake in two new operational hydroelectric power plants. They are located along the Bistrica river and produce clean electricity with a capacity of around 2.5 megawatts.

Aliquantum Energy plc invests capital from institutional investors and high-net-worth private investors in European hydropower generation plants. The company uses its contacts among political and business decision-makers in south-eastern Europe with a view to funding small and medium-sized run-of-the-river hydroelectric power plants in the region. Electricity from renewable energies is sold in Bosnia and Serbia under a remuneration system similar to that operated in Germany, guaranteeing ongoing cash flows of attractive proportions.
